

# Attaching a Sintra Banner to a Beltrac-grooved Post

## Parts List:

## Required Tools

## Assembly Instructions

1. Place Sign Clips in post by sliding into dovetail from top (Figure A).
2. Roughly position the Sign Clips near their final positions. Using the provided Allen wrench, tighten the "groove" set screw just enough to hold the Sign Clip in place. (Figure B).
3. Loosen the two "banner" set screws, and slide banner into Sign Clip channels. (Figure C).
4. Tighten the two "banner" set screws until flush to outside of Sign Clip (Figure D). This will secure the banner to the Sign Clip.
5. Tighten "groove" set screw to secure the Sign Clip to the post and remove any wobble.

### NOTES

- Be careful not to scratch the graphic with the Sign Clip during installation.
- Tall banners should rest on the base to carry the weight and increase the longevity of the product.
- When multiple banners are used on the same post, match banner Sign Clip location symmetrically on the posts for a cleaner aesthetic.
