

New Beltrac[®] Mechanism

2 Exposed Mounting Screws

New cap with exposed mounting screws eliminates the need to remove label to install mechanism.

3 Permanent Label Adhesive

Withstands extreme elements and prying fingers, keeping your post looking new for years.

1 Lower Torque Spring

New precision spring has lower torque ensuring a fully extended belt doesn't tip the post over.

4

Heavy-duty Construction

High-impact polycarbonate material eliminates breakage from extreme use or inclement weather.

5

Safe, Slow Belt Retraction

New one-way viscous dampener (brake) ensures a quiet, controlled retraction from any distance yet offers little resistance when pulling belt out.

6 Improved Belt-Guide

New design with thicker internal wings prevents belt-guide from coming free of the post, ensuring a smooth belt operation.

7 Ergonomic Belt-End

Tapered design fits well in hand. Dovetail end won't break free of post. Internal metal wedge stops belt from kinking and pulling free of belt-end. Fits all major brands.
