

NeXtrac Support Legs

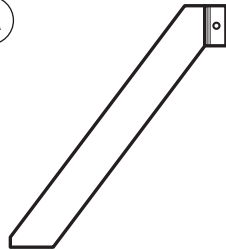

for Nextrac In-Queue Merchandising Systems

Parts:

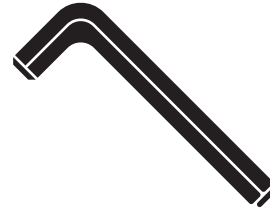

A. NeXtrac Support Leg(s)

B. Allen Wrench

A

B

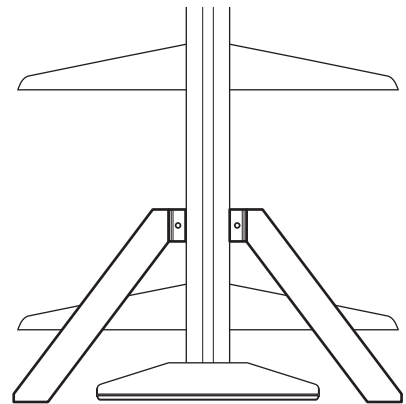

STEP

1

Positioning the Support Legs

Legs should be positioned perpendicular to the Slatwall Panels, protruding from the posts in the same direction as the Slatwall Shelves or other accessories.

Single-sided Slatwalls can have *Support Legs* on only one side - the side with merchandise. Double-sided Slatwalls should use *Support Legs* on both sides of the panel.

STEP

2

Attaching the Support Legs

Using the supplied *Allen Wrench*, loosen the grip connector on the end of the support leg by turning the black hex bolt counterclockwise.

Fit the grip connector into the dovetail groove towards the bottom of the Beltrac post with the support leg facing towards the floor.

Slide the *Support Leg* down until it rests firmly against the floor, then tighten it in place by turning the black hex bolt on the grip connector.
