Queue Guard™ Statement of Intended Use

The intended use of Queue Guard® panels is as an additional layer of protection implemented with other measures such as masks and social distancing already in practice. Government agencies have selected Queue Guard® to assist in protecting their employees and the public against the contraction of Covid-19.

Queue Guard® is designed as a “sneeze guard,” shielding individuals from airborne droplets in a multiple lane queueing environment. The specific layout of Queue Guard® panels should be determined by the facility, considering local building and health codes.

Queue Guard® panels can meet ADA requirements based on their size and functionality. ADA states that the lower portion of a queuing lane barrier should not be more than 27” from the floor. Queue Guard® meets this requirement when needed. The primary goal of the product is to assist in protecting the health of the public.
